

NES Objectives

Our Mission

Our mission is to help our clients protect their employees, their assets, and the environment in a way that makes business sense. This means finding efficient and effective ways to comply with laws and regulations, always with the goal of reducing risk and improving business performance.

Whether you are a small business, a large corporation, or a government agency, our experienced professionals will provide you with attentive, customized service that lets you take advantage of our up-to-date expertise to comprehensively address and resolve your training and/or operational compliance concerns.

Why Our Clients Come Back

The federal and state regulations that employers and their employees must consider on a daily basis can be complicated and commonly change from year to year. Our professionals have real-world experience managing these regulations, and we work closely with our clients to develop cost-effective solutions to often complex EH&S issues.

We excel in interpreting applicable regulations, explaining how they are typically enforced by regulators, and identifying what the monetary impacts can be to businesses that fall out of compliance. Whether we are providing consulting services, conducting training, sampling for hazards, or performing safety oversight, our approach is to regard your place of operations as an extension of our own, and our goal is to help protect your employees, the environment, and your bottom line.

NES About Us

"Our Business Is Protecting Your Business."

Established in 1987, NES, Inc. (NES) is a nationally recognized leader in environmental health & safety (EH&S) training and consulting. Our mission is to help our clients protect their employees, their assets, and the environment in a way that makes business sense.

We offer training across a broad range of EH&S topics to satisfy OSHA, EPA, and DOT training requirements for government agencies, regulators, and private businesses throughout the United States, and we have trained thousands of law enforcement personnel to respond to clandestine drug laboratory sites safely and effectively. We regularly participate in the annual California CUPA conference, providing hazardous waste management training and other compliance-based seminars on behalf of a diverse audience of attendees. Our environmental consulting expertise includes facility/site audits, waste management & transportation guidance, tank assessments, documentation review, plan preparation, and best management practice advisement.

NES provides industrial hygiene services covering indoor air quality, mold, water damage, hazardous materials exposure, and more. We administer major California storm water compliance groups and offer expert consultation on compliance concerns. Our professionals hold scientific degrees in a variety of professional registrations and maintain numerous certifications, including Certified Industrial Hygienist (CIH), Certified Asbestos Consultant (CAC), CDPH Certified Lead Inspector / Risk Assessor (CDPH I/A), and many others.

NES Our Services

Health & Safety In-Class & Online Training

NES provides open enrollment, on-site, and online instruction on a broad range of environmental health & safety issues, training staff at a multitude of government agencies and private industry businesses in California and beyond. Our experts have more than a century of combined experience working with government regulators and private-sector companies to ensure environmental compliance services and training

programs are delivered to meet state and federal requirements. This seasoned expertise results in effective training programs that can be relied on by employers and employees alike.

We have earned a solid reputation as a prominent industry leader, maintaining numerous in-house subject matter experts who are regularly invited as guest presenters to the annual California CUPA Conference. We provide training for state regulatory inspectors and are contracted with CUPAs throughout California to deliver select programs to regulated businesses.

“Day in and day out, employers need to stay compliant with state and federal regulations; without proper training, your business or organization is at increased risk of costly incidents and/or citations.”

– Jerry Bucklin
NES President & CEO

On-Site Training

NES instructors regularly deliver on-site training at the location most convenient for clients and their staff, which eliminates employee travel costs and reduces lost work time. We specialize in providing programs that are customized to meet the unique needs of our clients' organizations. The consultative relationships we build facilitate individualized training program content, enabling our professionals to more effectively help businesses maintain compliance with the numerous regulatory requirements they have to consider.

Customized Online Training

We offer many of our standard in-class EH&S training courses in web-based formats to help employees satisfy training requirements in as convenient a manner as possible. As with in-class training programs, NES offers customized online course development to fulfill individual clients' employee training requirements. New programs are constantly being developed and added to our lineup of online courses, webinars, and virtual training.

We Also Offer

- » REHS Contact Hours for In-Class/Online Courses
- » Customized On-Site Training
- » Client-Specific Web-Based Training Development
- » Qualitative & Quantitative Respiratory Fit Testing
- » Regularly Scheduled Open Enrollment Classes

- CPR/AED & First Aid
- Bloodborne Pathogens
- Confined Space Operations
- Globally Harmonized System
- Hazard Communication
- Lockout/Tagout
- Fall Protection
- Respiratory Protection
- Heat Illness Prevention

» & More!

Clandestine Laboratory Safety Training

NES is a leader in clandestine laboratory safety training for first responder personnel including members of law enforcement, hazmat, firefighter, and civil support teams. These training programs break down the various dangers inherent to clandestine laboratories, chemical suicides, marijuana grows, and other hazardous sites that may be encountered by first responders. NES was instrumental in developing the first clandestine laboratory safety courses for the U.S.

Drug Enforcement Administration and has been conducting these focused training programs for over 31 years on behalf of federal, state, and local law enforcement agencies throughout the United States and internationally. Besides training, NES supports first responder personnel by serving as a technical guidance resource and providing consultation and expert witness testimony for government agencies responsible for investigating these hazardous materials scenes. NES has published numerous technical publications and products relevant to field safety activities during clan lab-related operations, including an assortment of clandestine laboratory field guides.

Environmental Consulting

NES provides environmental compliance and consulting services on behalf of a broad range of clients. Comprising professionals with decades of industry experience, our EH&S consulting team applies proven risk management concepts to the goal of delivering customized solutions to compliance issues in a timely and cost-effective manner. Environmental consulting services frequently complement and/or coincide with EH&S training to further advance

regulatory compliance efforts. Our clients include numerous manufacturers, commercial & retail entities, construction companies, trade associations, health care providers, academic institutions, regulatory agencies, and federal, state, and local municipalities.

Industrial Hygiene

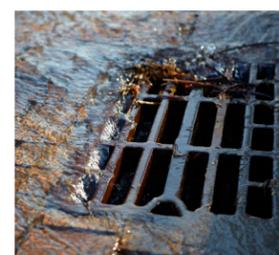

NES performs a wide range of industrial hygiene services throughout California and across the United States. Our professionals are skilled in competently conducting assessments and evaluations to assist clients in achieving peace of mind. Industrial hygiene services may involve site evaluations and personnel interviews, employee and area air monitoring, surface and bulk sampling of materials, review of written health & safety plans and programs, and employee training on

industrial hygiene topics. These services are commonly performed in response to an occupational injury or employee concerns regarding potential exposure to workplace contaminants or chemicals. NES may also be retained to evaluate potential employee exposure due to the implementation of a new workplace process or procedure or as part of a regularly scheduled review of company health & safety programs and policies to maintain compliance with OSHA regulations.

Safety Compliance Observations

From both the employee's and the employer's perspectives, safety observations are of great benefit to construction operations. NES has performed safety observations on numerous projects, supporting safety goals to achieve and maintain a culture of heightened safety awareness. Through careful and attentive observations, our team approach has been successful at identifying potential safety hazards, communicating those findings effectively to the appropriate personnel, documenting the hazards (and good practices) observed, and taking the proper remedial actions.

Storm Water Compliance

We specialize in guiding businesses in the industries of trucking, warehousing, manufacturing, recycling, and more through Industrial General Permit (IGP) regulations, and we facilitate compliance efforts by providing support and expertise on behalf of industrial facilities and construction projects. Since 1999, NES has served as the Technical Group Leader for the California Trucking Association Storm Water Compliance Group (CTACG), the largest storm water compliance group in California. These valuable services benefit members by reducing overall costs, simplifying compliance efforts, and contributing to a broader understanding of key best management practices.

Clan Lab Training

- » Basic/Advanced Clandestine Laboratory Safety
- » Clandestine Laboratory Refresher
- » Fentanyl & Other Synthetic Opioids
- » Site Safety Officer
- » Clan Lab Chemistry
