About NES

NES, Inc. (NES) has been providing professional environmental consulting services on behalf of a diverse range of clients since the company's inception in 1987. Comprising highly experienced professionals, the NES EH&S consulting team applies proven risk management concepts to the goal of delivering customized solutions to compliance issues in a timely and cost-effective manner. Our clients include numerous manufacturers, commercial and retail entities, construction companies, trade associations, hospitals and other health care providers, law firms, educational institutions, regulatory agencies, and federal, state, and local municipalities. Whatever the service that we're providing, we maintain one philosophical focus:

Our Business is Protecting Your Business.

NES How We Can Help

Environmental Compliance & Consulting

NES provides a range of environmental compliance and consulting services including site audits, technical and regulatory advice, litigation support, staffing, hazardous waste treatment permitting, and training. Our clients retain our services due to the scope of expertise we provide, which covers all aspects of hazardous materials management, from handling and storage regulations to the safe and compliant transportation of hazardous materials, materials of trade, and hazardous waste. We prepare and revise Spill Prevention, Control, and Countermeasure (SPCC) Plans, Hazardous Materials Business Plans (HMBPs), site audit findings reports, hazardous waste/materials management standard operating procedures (SOPs), and more.

Industrial Hygiene

NES has performed a wide range of industrial hygiene services throughout California and across the U.S. Our professionals are skilled in conducting cost-effective assessments and evaluations with the goal of assisting our clients to achieve peace of mind in their particular areas of concern. Achieving this may require services such as site evaluations, employee and area air monitoring, surface and bulk sampling of materials, review of written health & safety plans and programs, and employee training. The NES IH team is composed of subject matter experts holding a range of certifications including, but not limited to: Certified Industrial Hygienist (CIH), Certified Safety Professional (CSP), Certified Asbestos Consultant (CAC), Certified Site Surveillance Technician (CSST), Certified Professional Environmental Auditor (CPEA), Qualified Industrial Storm Water Practitioner (QISP), and California Department of Public Health Certified Lead Inspector / Risk Assessor (CDPH I/A).

Occupational Health & Safety

NES helps clients develop and maintain occupational health & safety programs that comply with federal and state regulations and protect worker safety. These services include construction safety oversight, worksite evaluations, program gap analyses, exposure assessments, accident investigations, root cause analyses, and safety training. We also develop specialized workplace safety training programs on behalf of our clients in both in-class and web-based formats.

Clandestine Laboratory Safety Training

NES is recognized internationally as the leader in clandestine laboratory safety training. We developed the first clandestine laboratory safety program in the U.S. on behalf of the U.S. Drug Enforcement Administration over 30 years ago, and we have continued to update our training programs and design additional courses ever since. We have trained thousands of law enforcement personnel from around the globe to safely and effectively approach and dismantle various types of clandestine drug labs and to work in other illicit hazardous environments.

We Also Offer:

- » Customized On-Site Training
- » Online Training Program Options
- » Client-Specific Web-Based Training
- » Open Enrollment at our Training Facilities
- » Qualitative and Quantitative Respiratory Fit Testing

Visit our website NESglobal.net for training dates and a list of our online training courses.
